

**DINGHY COMPOSITE MAST STEP 510-148-01**

1. The dinghy composite mast step is designed for use with Selden Masts using standard mast bases: (502-517, 502-518, 502-519, 502-520)
2. The fitting must be used with the three cap head bolts and nuts supplied, removal of any of these will put excessive load on to the fitting and may cause failure.
3. The fitting has reinforced areas front and back, which are designed to take vang/kicker loads etc via a clevis pin. Do not attach extra fittings or apply loads anywhere else.
4. Do not modify the fitting (eg by cutting it shorter) this will cause failure, if a shorter fitting is required then contact Selden Masts Ltd.
